

How to use Analytics Hub

Previously, you explored Google Analytics Hub, a data library that allows publishers to share access to exchanges, including data sets, machine learning models, and analytics. As a cloud data analyst, there's lots of opportunities to both share and access datasets through Analytics Hub. In this reading, you'll learn how to create an exchange, and how to access datasets.

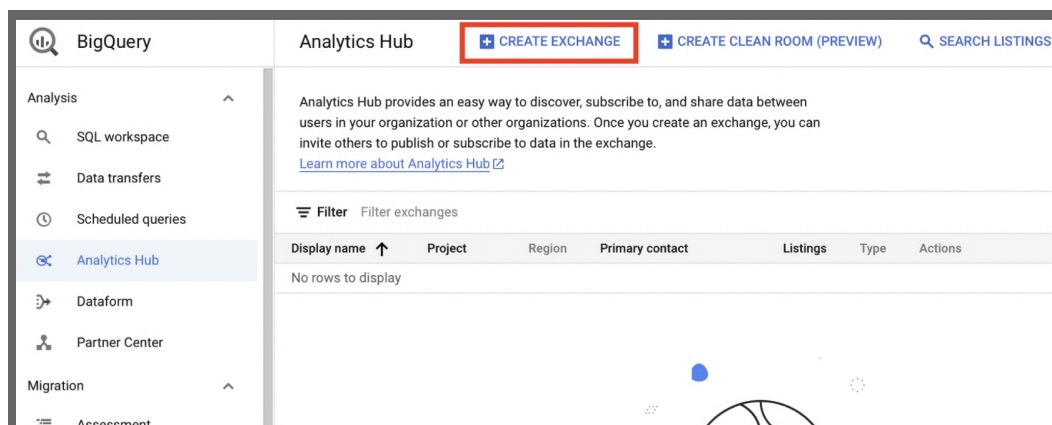

Create an exchange

To create your own data exchange, follow these steps:

1. Navigate to the Analytics Hub page.

2. Click CREATE EXCHANGE.

3. Select the Project and Region.

Search (/) for resources, docs, products, and more

CHANGE + CREATE CLEAN ROOM (PREVIEW) SEARCH LISTINGS

r, subscribe to, and share data between
s. Once you create an exchange, you can
he exchange.

Primary contact	Listings	Type	Actions
You don't have access to any exchange			

1 Exchange Configuration

Project *

Analysis

- SQL workspace
- Data transfers
- Scheduled queries
- Analytics Hub**
- Dataform
- Partner Center

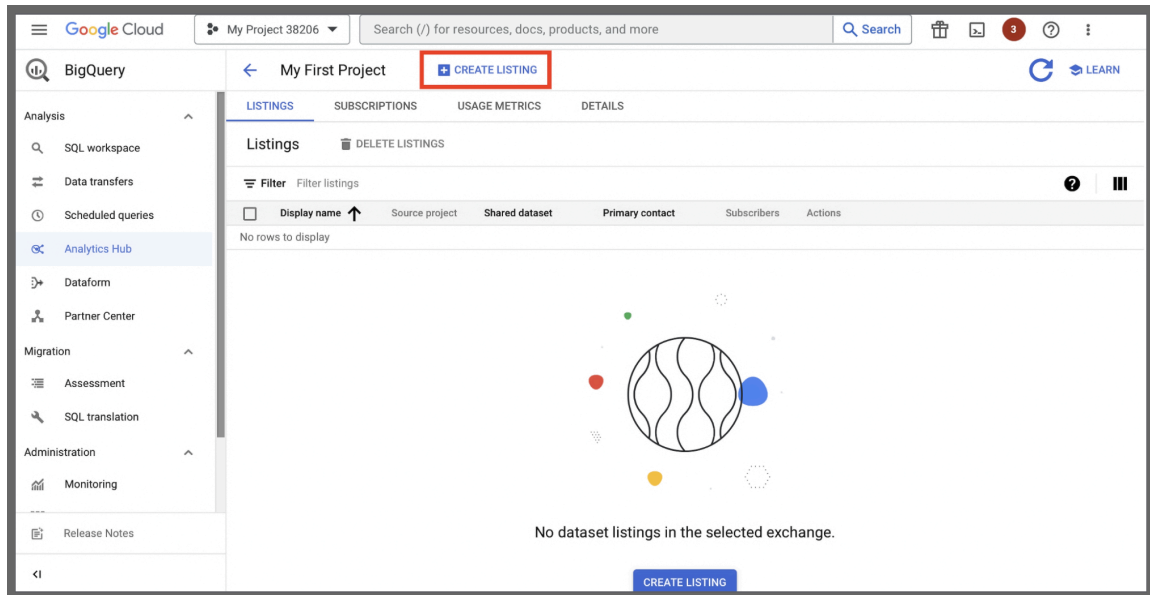

Migration

- Assessment
- SQL translation

Administration

- Monitoring
- Release Notes

- To add data to the listing, click the Display name to view the exchange details and click CREATE LISTING at the top.

- Fill in the listing details by creating a Display name.

9. Then, select or create a Shared dataset.

The screenshot shows the 'Create listing' form in the Google Cloud console. The form has a sidebar on the left with navigation links for Analysis, Migration, and Administration. The main content area has a header 'Create listing' and a search bar. Below the header, there are three main sections: 'Icon' with a 'BROWSE' button, 'Description' with a text area, and 'Shared dataset' with a dropdown menu. The dropdown menu is open, showing 'CREATE NEW DATASET' and 'Datasets'. Below the dropdown, there is a checkbox for 'Disable copy and export of query results'. At the bottom, there are 'SAVE' and 'CANCEL' buttons.

10. After you click save, your dataset will appear in the Shared dataset column on the exchange listing page.

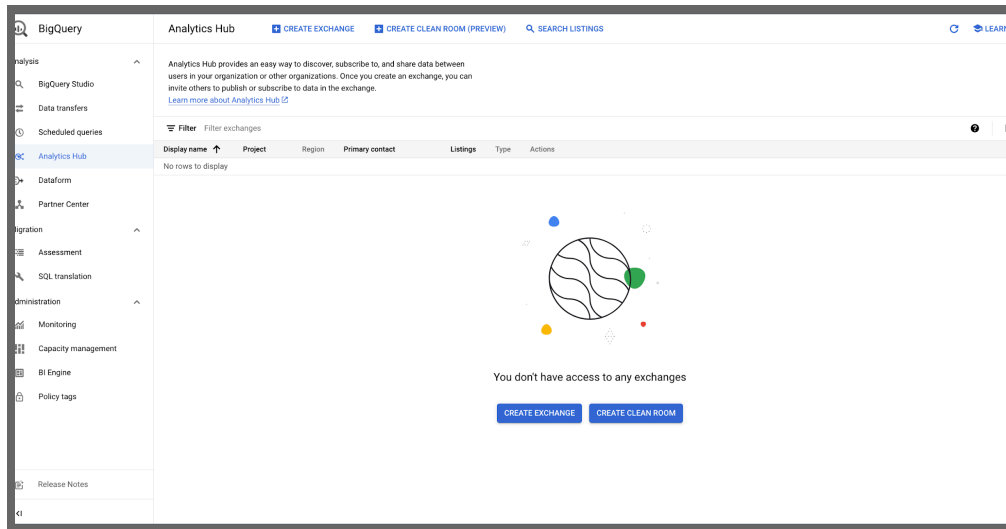

The screenshot shows the 'My First Project' page in the Google Cloud console. The page has a sidebar on the left with navigation links for Analysis, Migration, and Administration. The main content area has a header 'My First Project' and a search bar. Below the header, there are four tabs: 'LISTINGS', 'SUBSCRIPTIONS', 'USAGE METRICS', and 'DETAILS'. The 'LISTINGS' tab is selected, showing a table of listings. The table has columns: 'Display name', 'Source project', 'Shared dataset', 'Primary contact', 'Subscribers', and 'Actions'. There is one listing with the name 'My First Listing', source project 'ascendant-epoch-377921', and shared dataset 'xyzzy'.

Display name	Source project	Shared dataset	Primary contact	Subscribers	Actions
My First Listing	ascendant-epoch-377921	xyzzy		0	

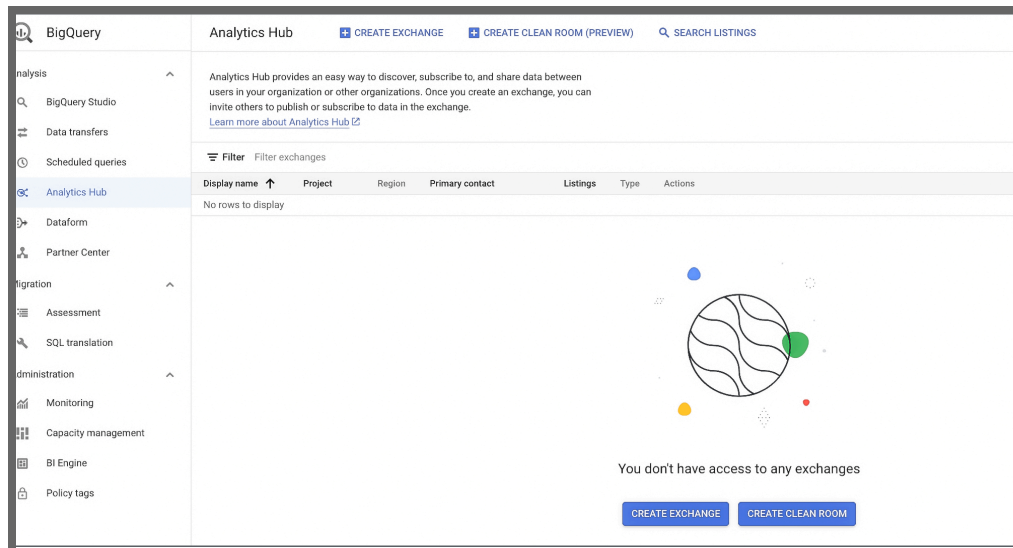

Find a dataset

To search for and use a publicly shared dataset, follow these steps:

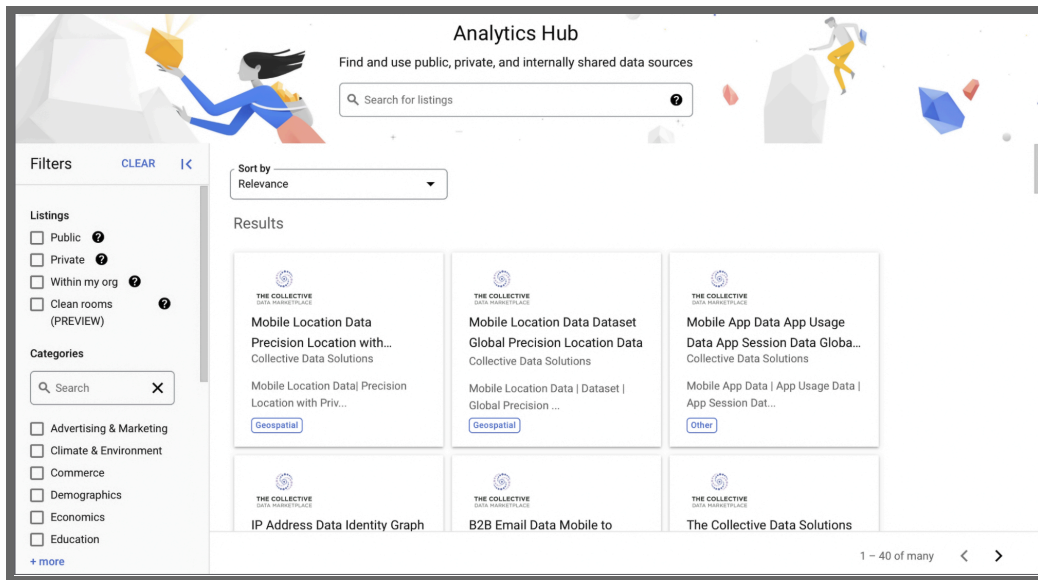

1. Navigate to Analytics Hub in BigQuery.

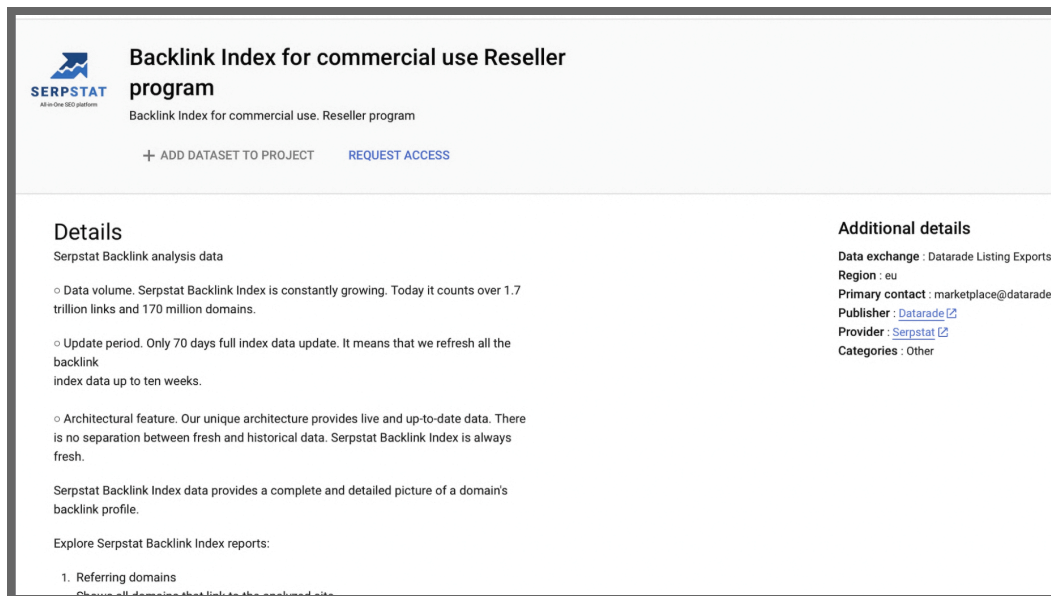

2. Click SEARCH LISTINGS.

- Use filters or search the Analytics Hub Marketplace, and from this menu, select your dataset.

- Select ADD DATASET TO PROJECT

Key takeaways

You can create dataset exchanges and access published datasets via Google Analytics Hub. With no code, using the user interface, you can also create and add exchanges via BigQuery.

Resources for more information

To learn more about managing exchanges and accessing datasets in Analytics Hub, check out these links:

- Google Cloud's documentation provides information about managing data exchanges:
<https://cloud.google.com/bigquery/docs/analytics-hub-manage-exchanges>
- Google Cloud's documentation also provides information about how to manage subscriptions as an end user of Analytics Hub:
